The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter Щ in Russian and Bulgarian, respectively, since the pairs of letters (ЩЧ in Russian and ШТ in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 1s.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

ABSTRACTS AND CURRENT PAPERS JOURNALS

Three main subject areas are covered by INSPEC abstracts and current papers journals: physics, electrical and electronics engineering, and computer and control en-

gineering. For each field an abstracts journal and a companion titles journal are published. The abstracts journals are intended as library tools for retrospective information

retrieval, whereas the companion titles journals, which omit the abstracts and associated indexes, are intended as low-cost current-awareness tools for the individual.

CUMULATIVE INDEXES

Cumulative indexes are available for *Physics Abstracts*, *Electrical & Electronics Abstracts* and *Computer & Control Abstracts*, for both

authors and subjects. These cumulations generally cover a period of four years, with the exception of *Computer & Control Abstracts*

where the initial volume covered the period 1966-68. The table below shows the prices and periods for the two types of cumulative index.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC database. Information is dispatched weekly on 150 mm x 100 mm (6" x 4") cards.

TOPICS

This is an SDI service based on standard profiles. There are 73 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

These are produced, containing all the information included in the INSPEC publications. They enable the larger research and development organisations to produce their own internal information and current-awareness services.
